INTRODUCING MY BEST APP

MMPG

- A music app is a software application designed to allow users to listen to, organize, and manage their music collections. These apps often offer a wide range of features, such as the ability to create playlists, search for specific songs or artists, and even discover new music based on the user's listening habits.
- One of the key features of a music app is the ability to stream music directly from the internet. This means that users can access a vast library of songs without needing to store them on their device. Many music apps also offer the option to download songs or playlists for offline listening, which can be useful for users who are traveling or have limited internet connectivity.

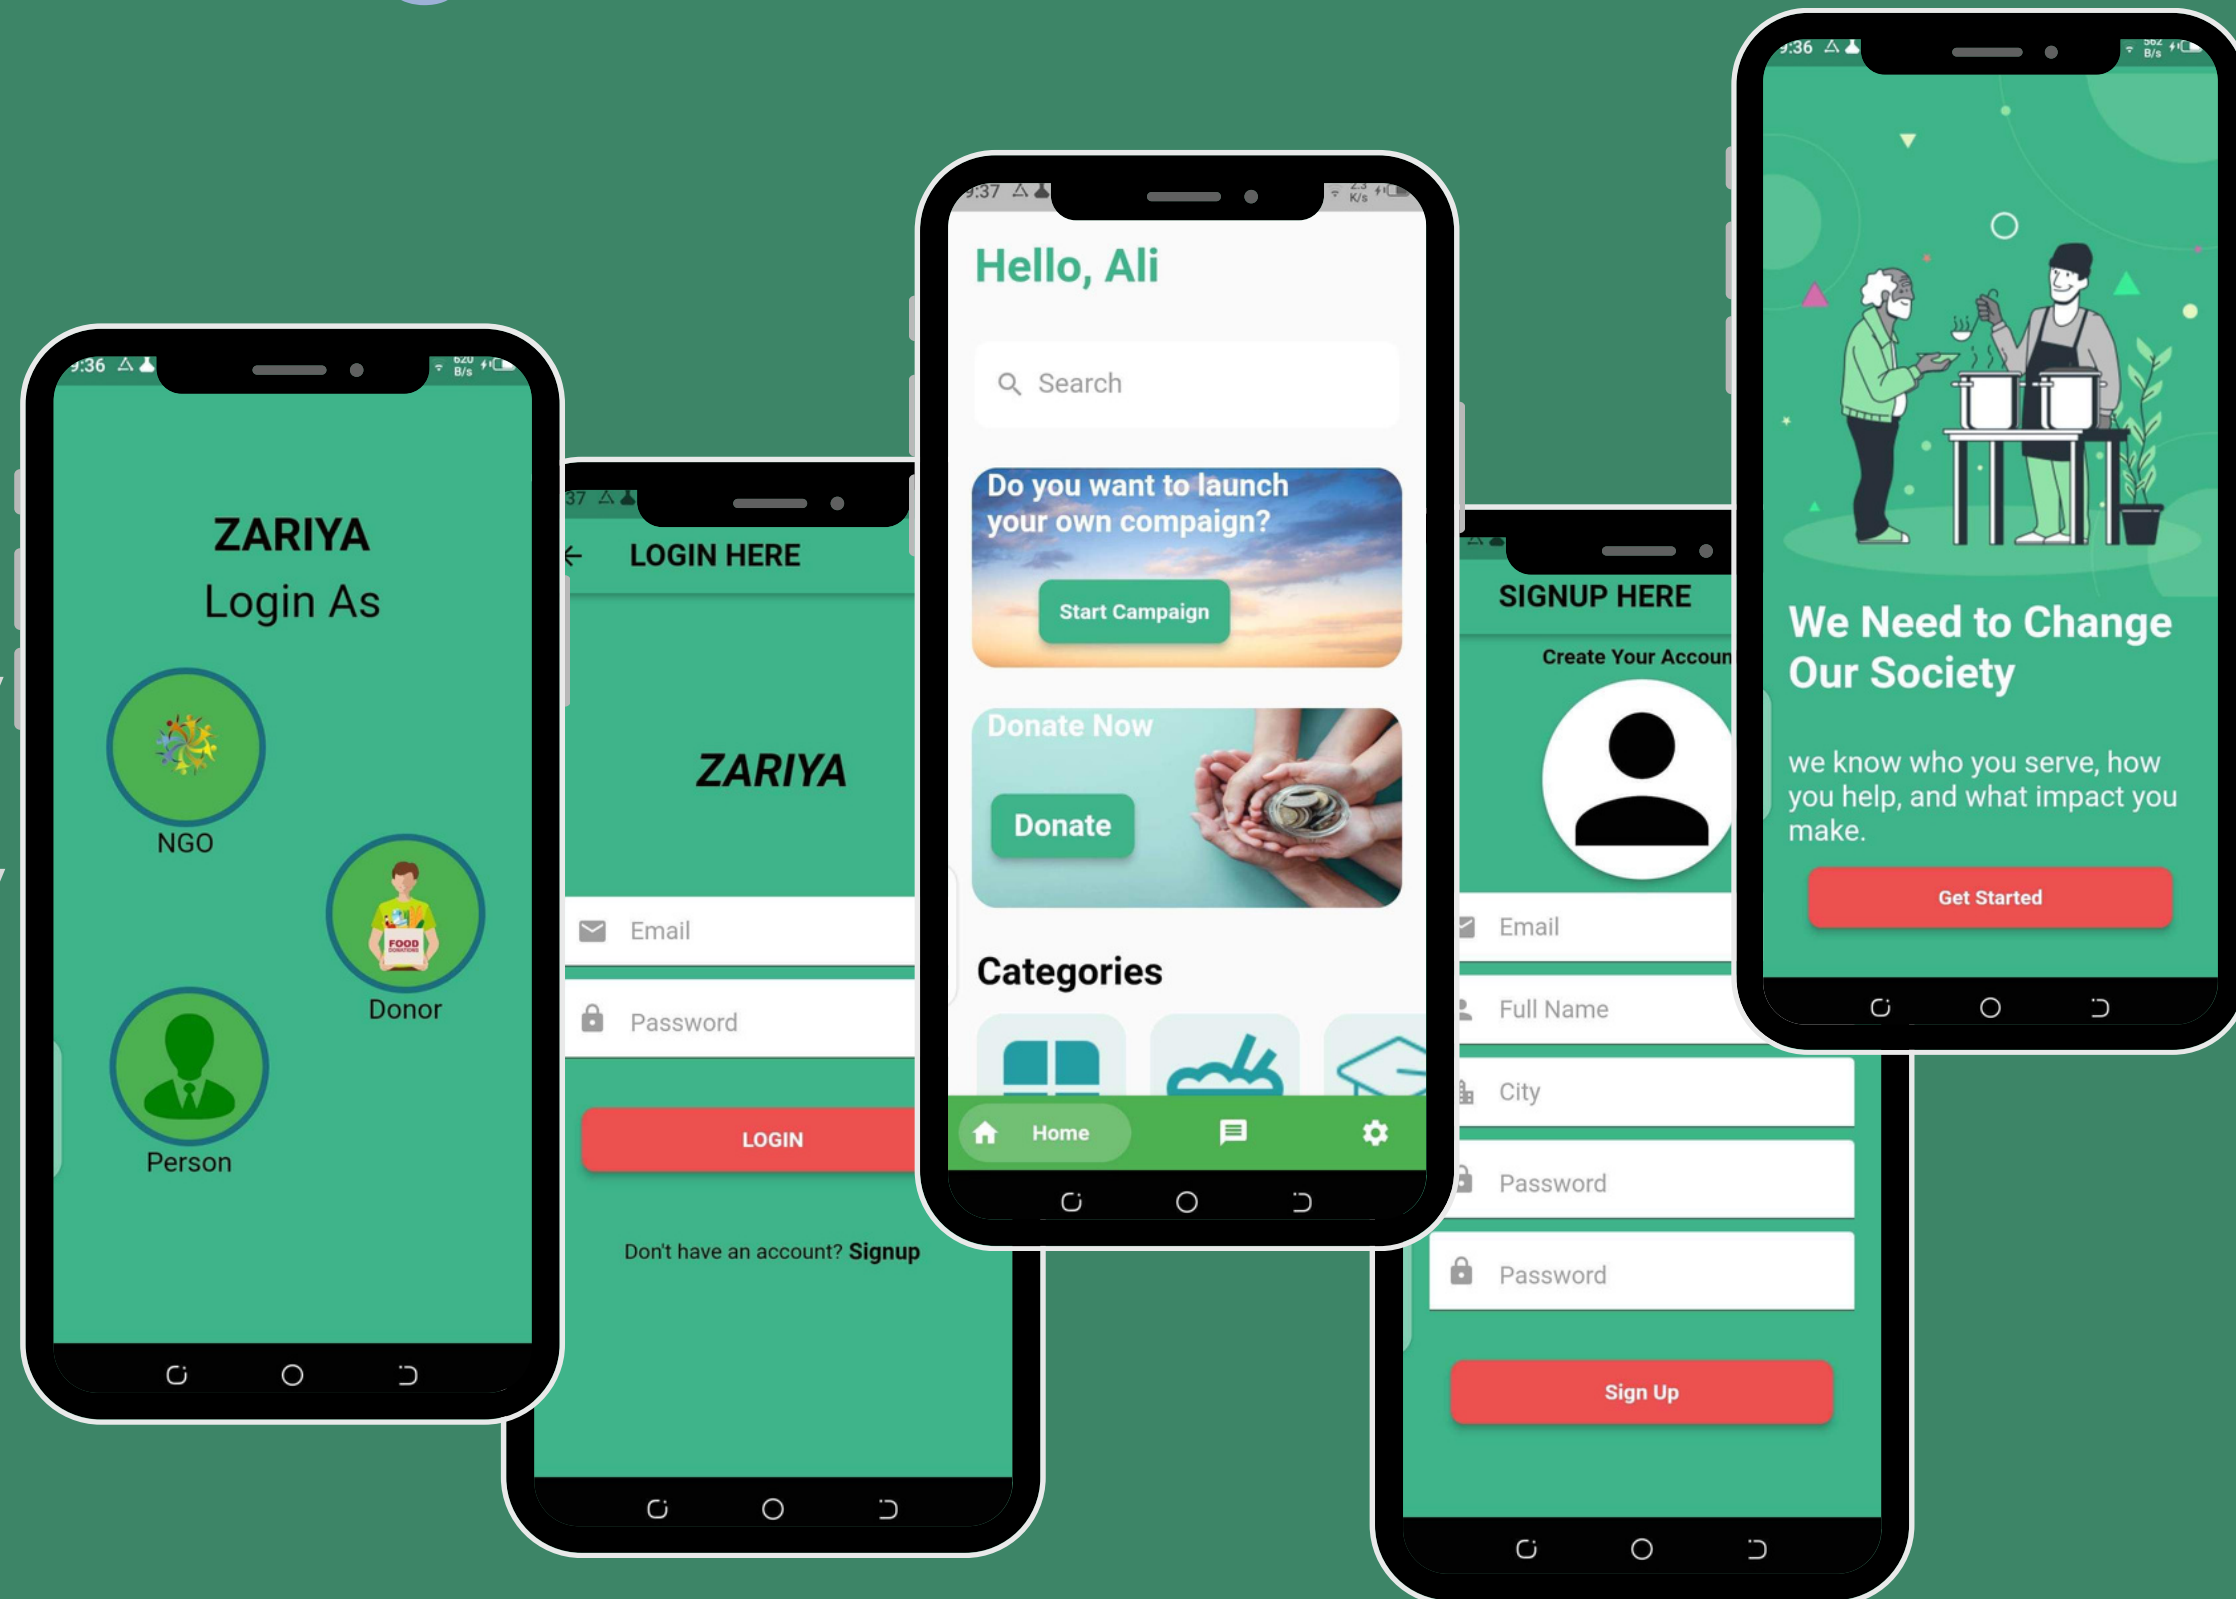

MMPG

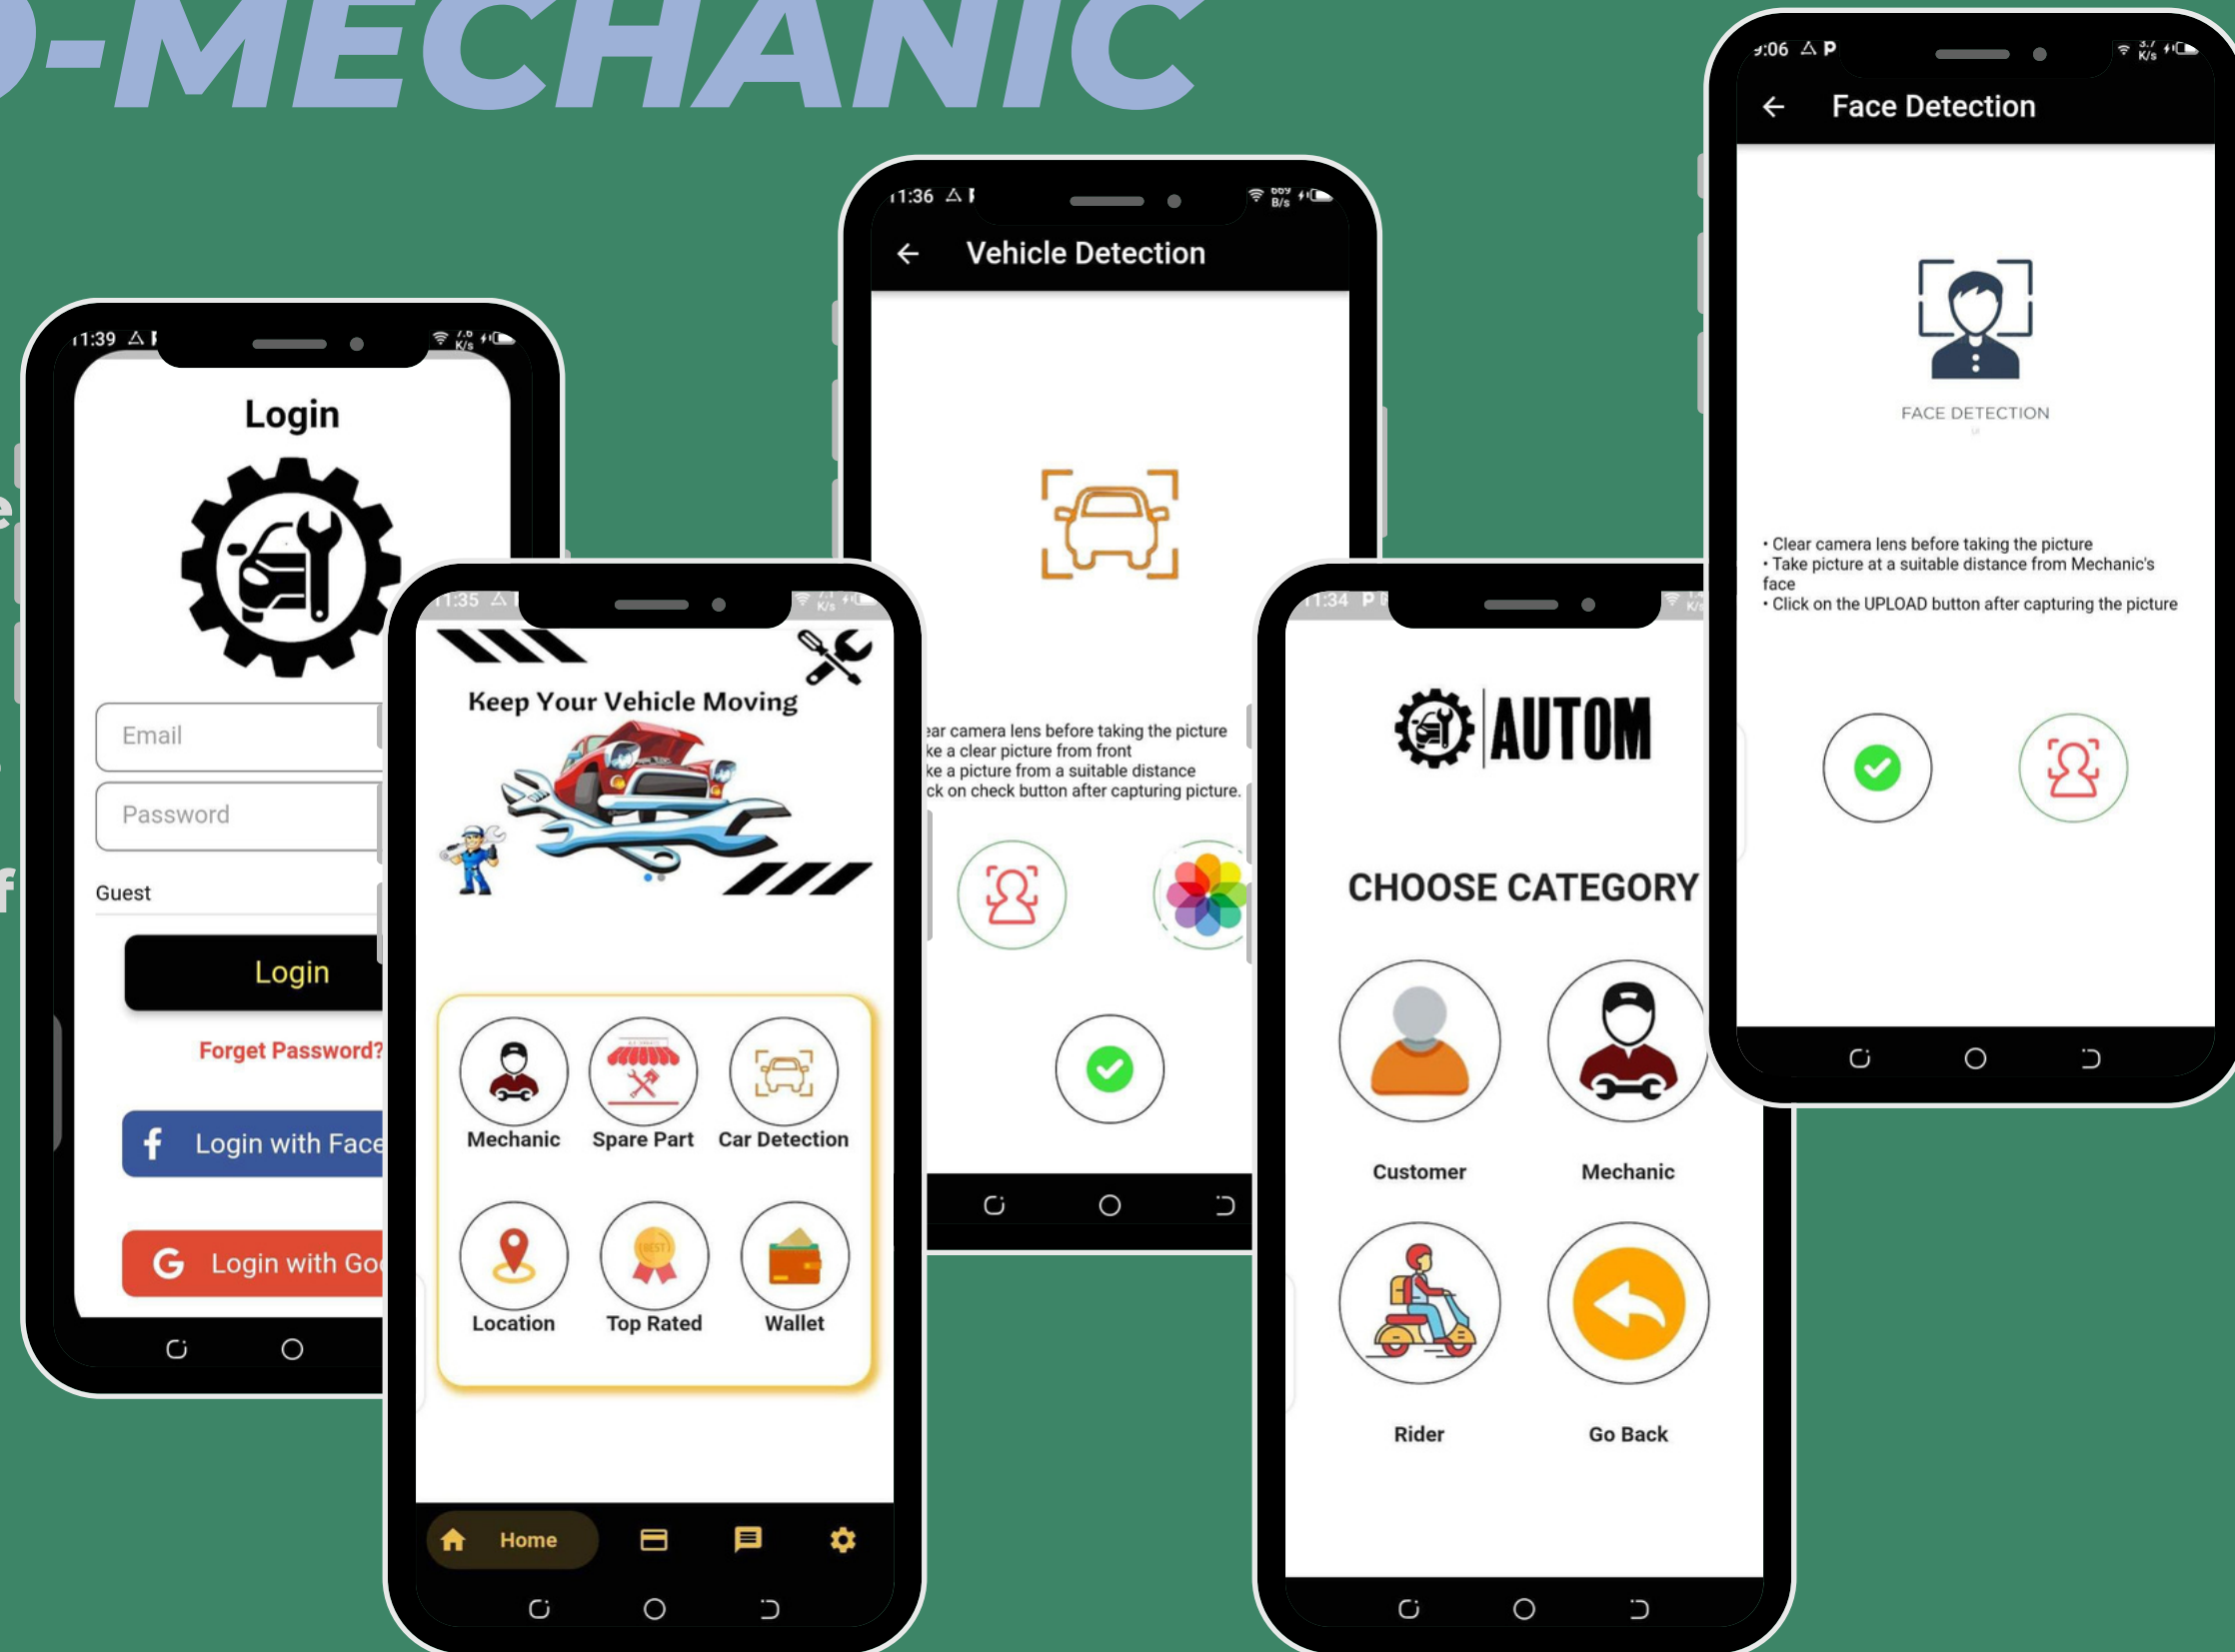

Zariya

- In the era of modern world, practically everything has moved online, making it simpler to support the community because you can do it while sitting at home.
- The current generation of charitable organizations operates manually. This industry needs to go digitally current because it will make donation collection and use easier.
- Also, Food waste is a major problem in densely populated countries like Pakistan these days.
- There is evidence that a lot of food is thrown out in garbage cans, streets, and landfills. Marriages, canteens, restaurants,
- we can put it to good use by donating it to organizations such as orphanages, nursing homes, NGOs, and so on.

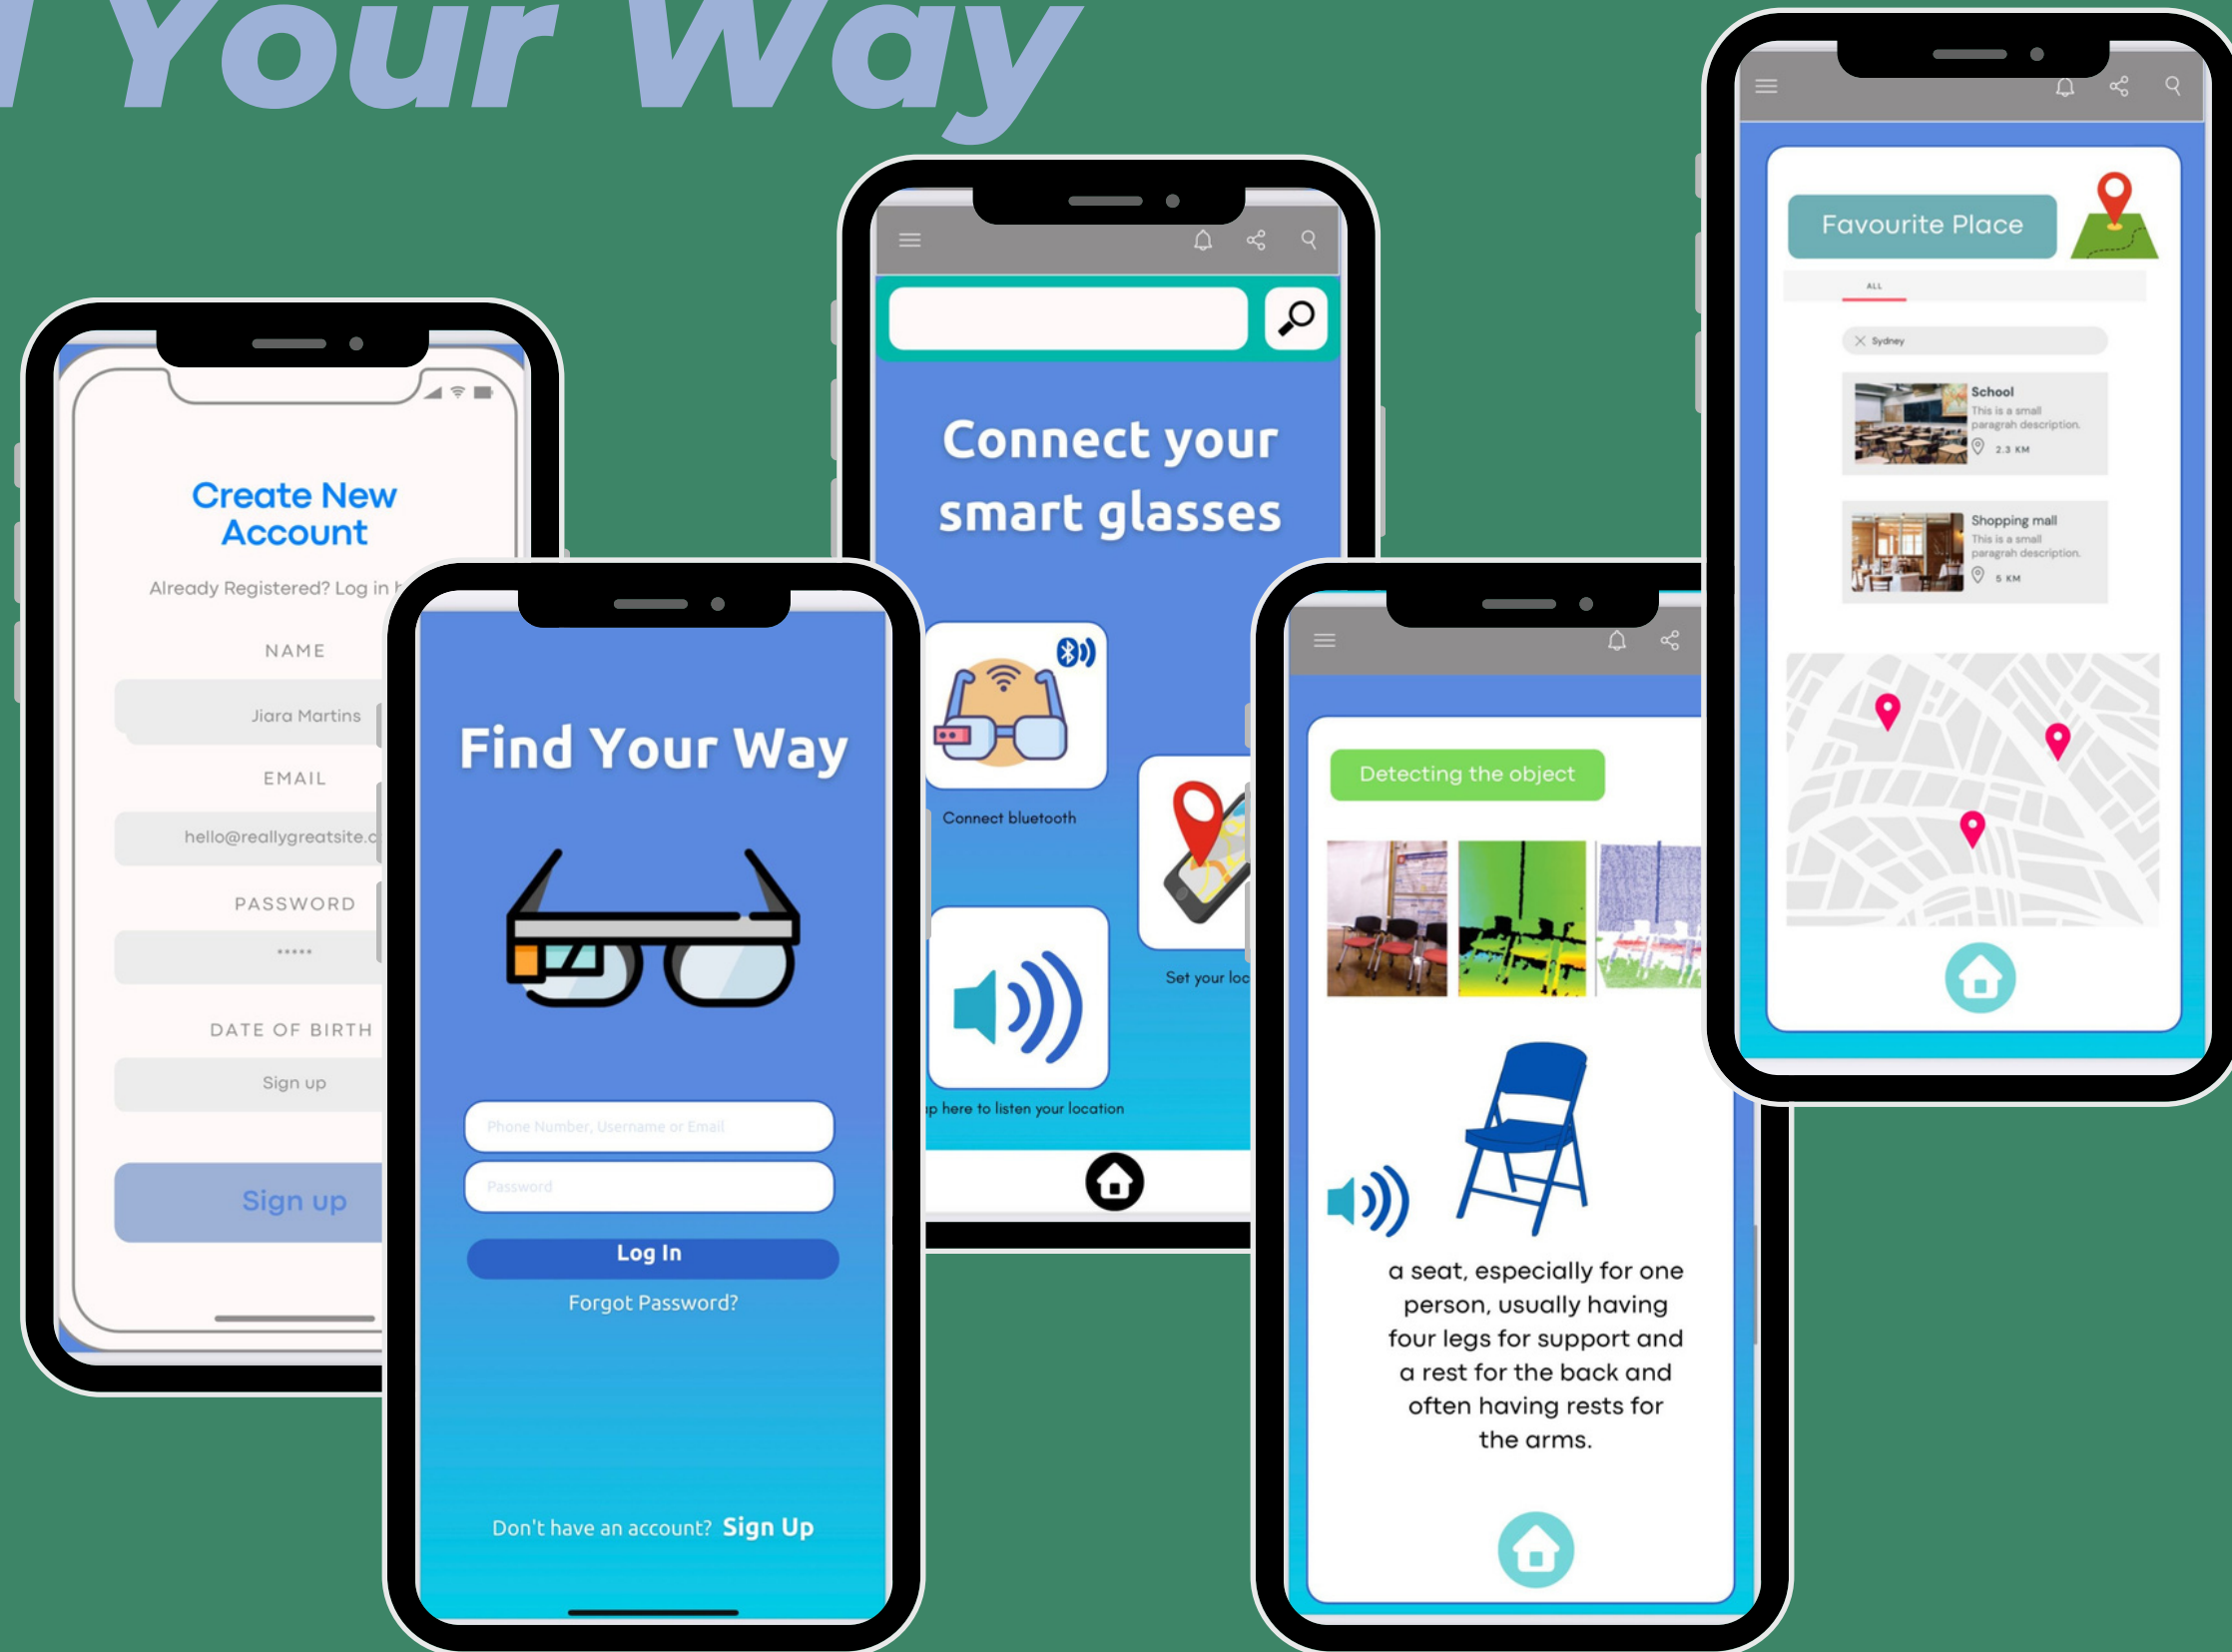

AUTO-MECHANIC

- Autom is a mobile application that help vehicle users in remote area where he/she face difficulties to find a mechanic or spare parts shop.
- Basically our goal is to facilitate users just liike cream, uber apps so that they can find mechanic easily. Mechanic can register himself and can sell their services easily.
- We use machine learning for car detection that help user to know about his/her vehicle model and will notify mechanic so that he can carry relevant instruments.

Find Your Way

- Greetings! I've recently done another flutter project that involved smart glasses. The project was developed in dart and firebase was used for storage due to its fast response time.
- We developed an app that connects to smart glasses through bluetooth and then guide the person through directions on glasses and audio also.

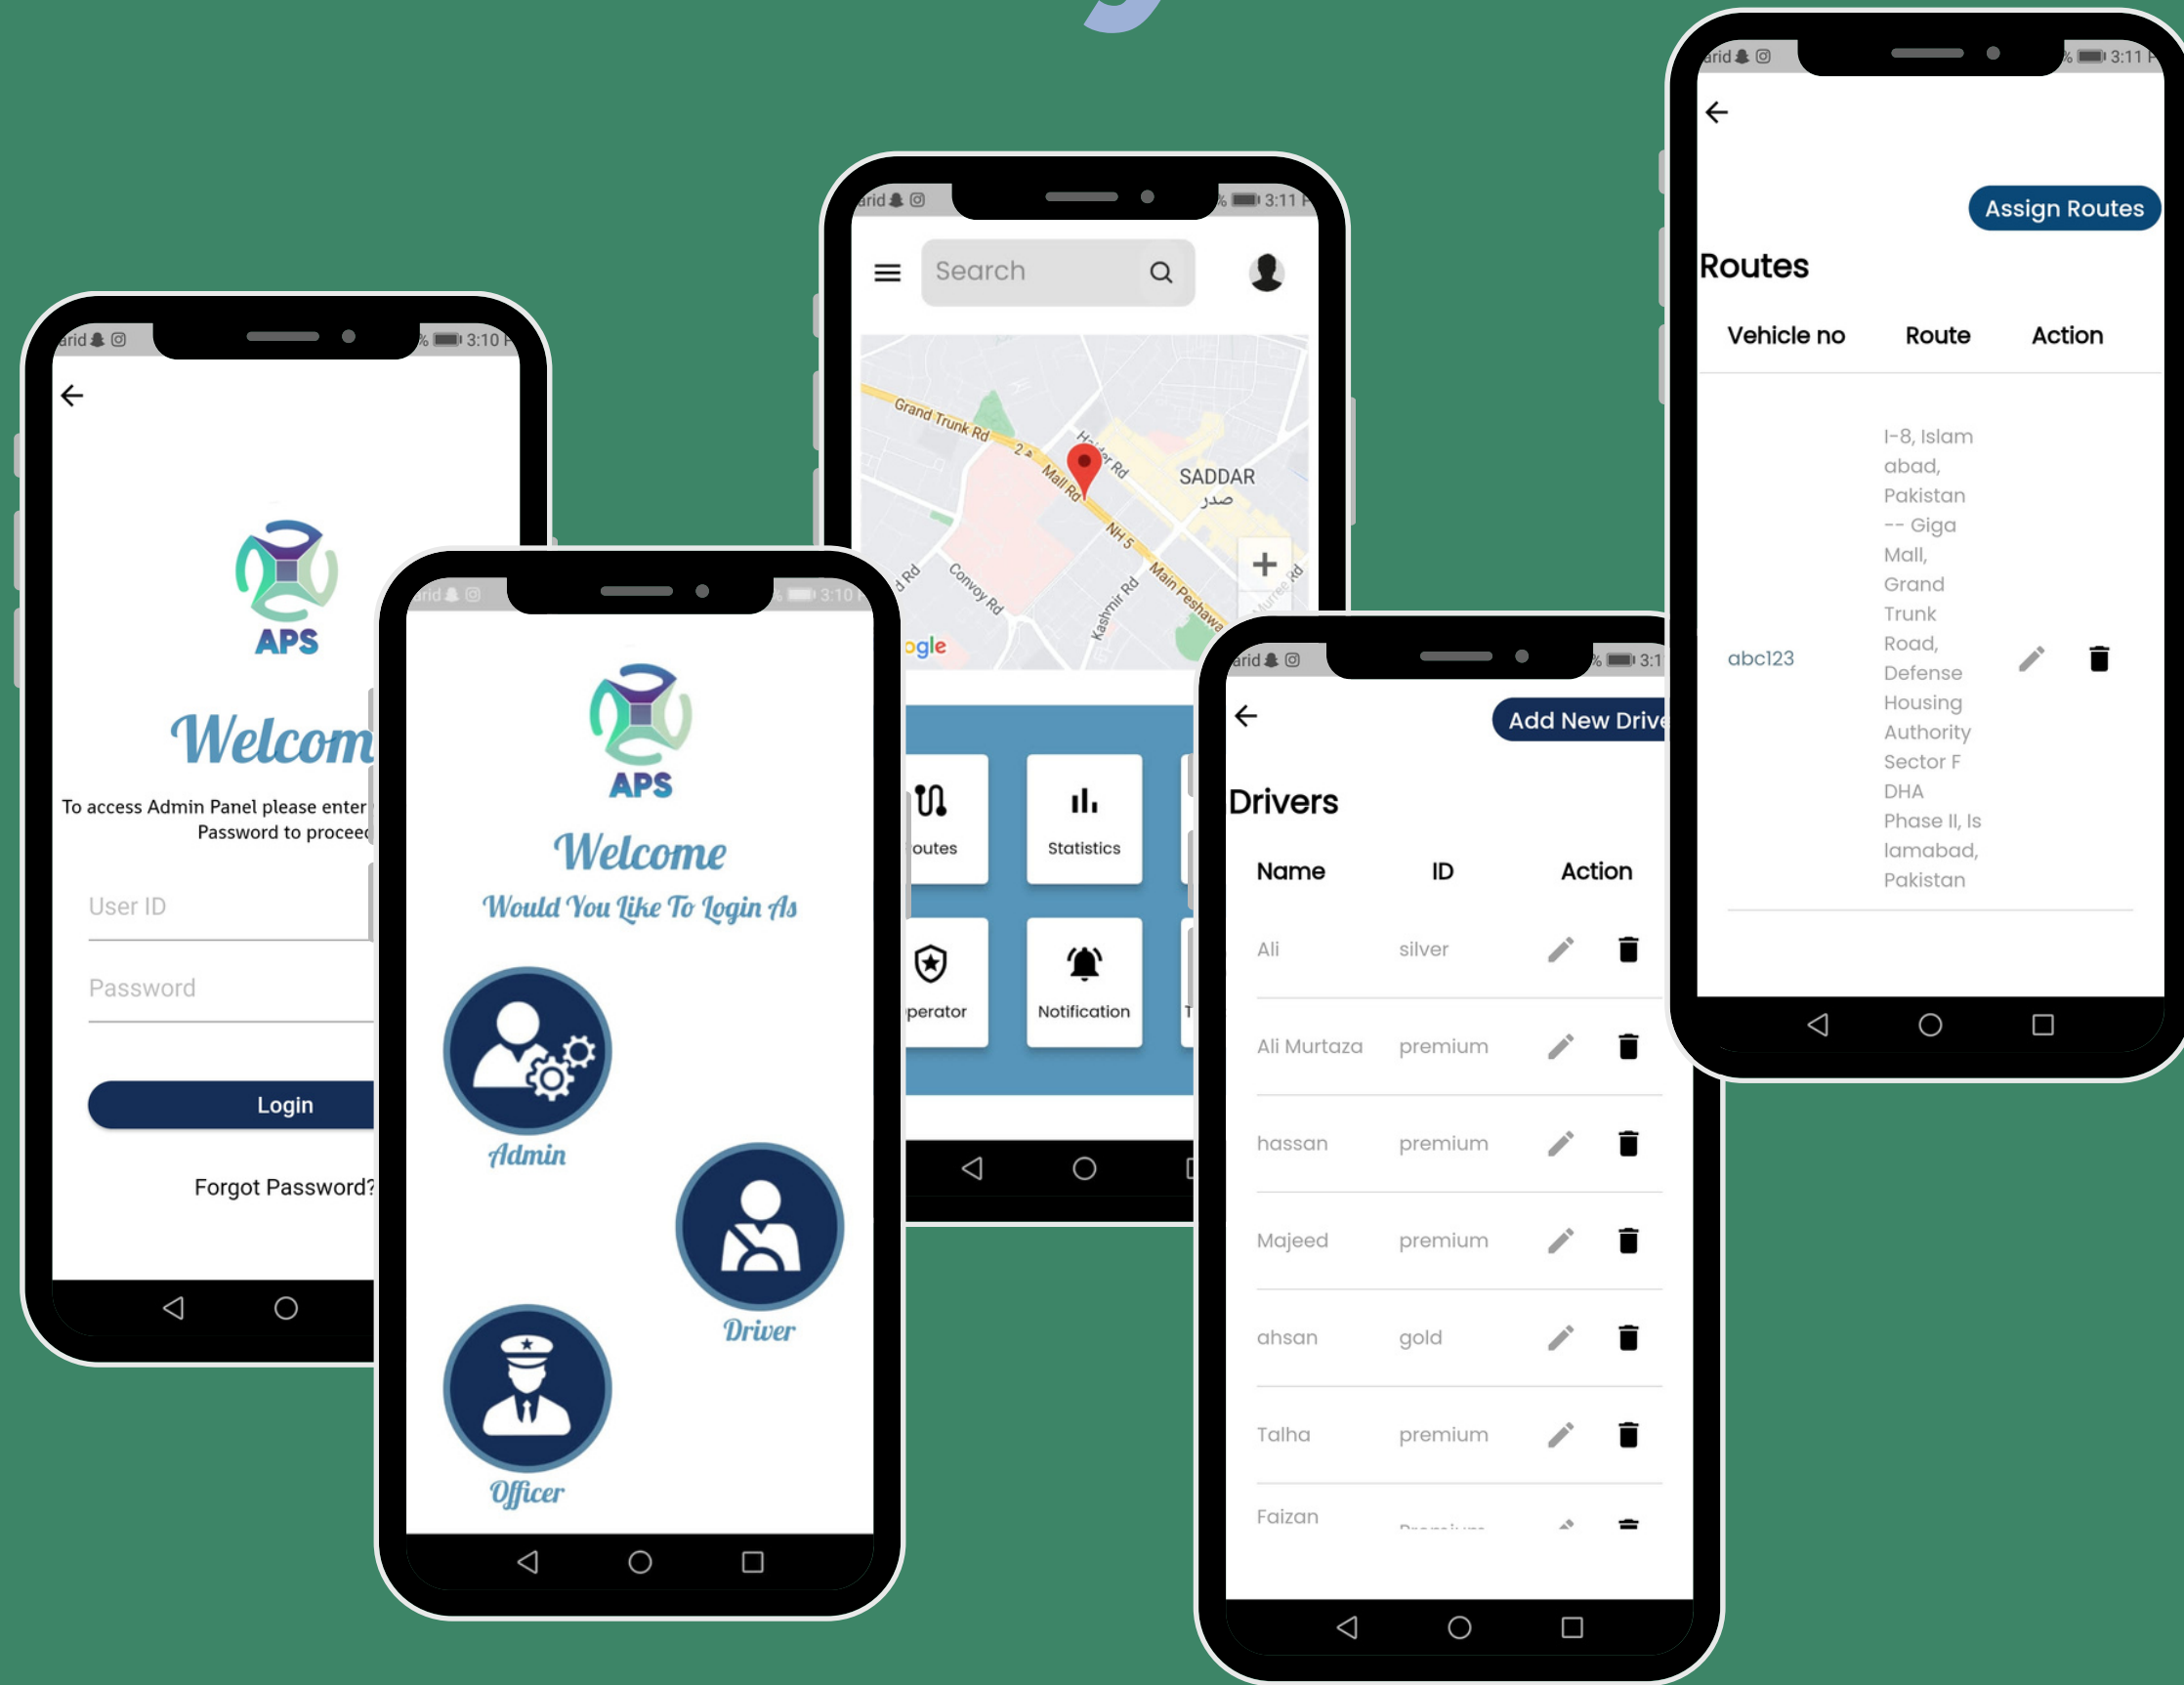

Act My Pose

- We are proud to announce that we have recently completed the first half of a pose app development project for one of our clients from Karachi.
- The app is built using Flutter and utilizes Firebase database for storage and the Python MediaPipe library for pose comparison. We are currently in the process of completing the second half of the project.

Accident prevention system

- **Accident Prevention System** is a smart-phone based application which is supposed to aid a private transport company to reduce and minimize number of road accidents by real-time monitoring of drivers.
- The concept is to use real-time image processing to track driver drowsiness and warns drivers when they become drowsy. In addition, the device uses sophisticated image processing and machine learning algorithms to determine whether the motorist is wearing a seatbelt.
